

Connecting to VPN with Cisco AnyConnect

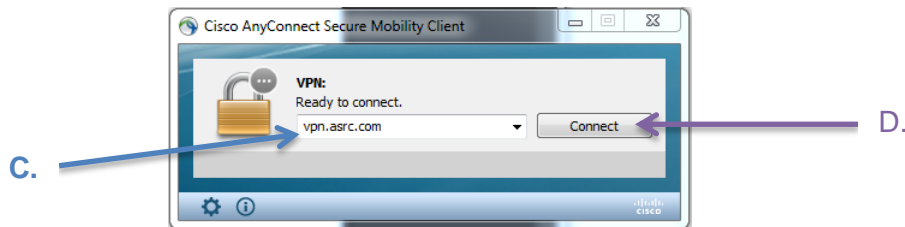

**You must be connected to the internet in order to log in to VPN, also, you cannot currently be connected to the ASRC Network (laptop on the docking station plugged in, connected to ASRC Wireless).*

Notice Only affects Laptop VPN users!!!

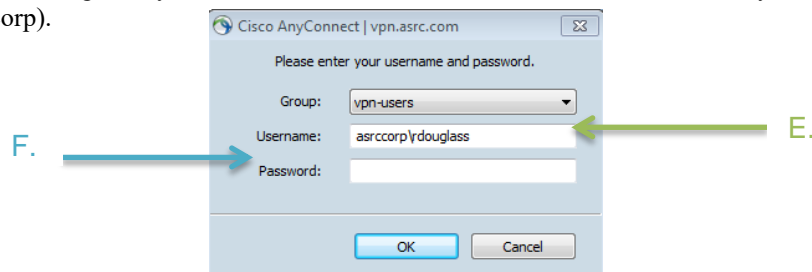

1. Open the VPN Client by going to your Start Menu and typing in “Cisco AnyConnect Secure Mobility Client” or by going to your notifications in the bottom right hand corner of your task bar (A.) and click on the Cisco AnyConnect icon (B.).

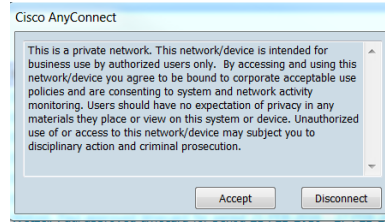

2. The text field in the client will have **vpn.asrc.com** (C.), you can also manually enter the address. Click Connect (D.).

3. The **Group** field will be: **vpn-users** (E.)
4. The **Username** field must be in the **domain\username** format shown below (F.). These are the same username/password used to log in to your PC/access email. Please note that the Username may not need the domain(asrccorp).

5. If successful, you will see an acceptance notice, click “Accept”.

6. You'll now be connected to the ASRC Network and able to access all network resources such as Network Drives.
